PROFESSIONAL SUMMARY

Smart India Hackathon (SIH) 2025–26 Finalist and Full-Stack Developer skilled in **Node.js, Express.js, PostgreSQL, React, Python**, and **Supabase**. Proven experience architecting live production systems including a real-time relationship companion platform (couplewatch.in) and an AI-driven lunar telemetry simulation engine. Strong foundations in relational database schema design, indexing, WebRTC peer-to-peer sync, and RESTful API architecture. Seeking a **Remote Software Engineering Internship**.

TECHNICAL SKILLS

Languages & Core: JavaScript (ES6+), Python, SQL (PostgreSQL), HTML5, CSS3, Data Structures & Algorithms
Backend & Databases: Node.js, Express.js, PostgreSQL (relational modeling, schema indexing, ACID transactions), Supabase, RESTful APIs
Frontend & Real-Time: React.js, React Native, Tailwind CSS, WebRTC (peer-to-peer audio/video streaming), Web Speech API
AI & Tools: Gemini API, OpenAI API, Prompt Engineering, Git, GitHub, Postman, Linux/Unix CLI

FEATURED PROJECTS

Couple Watch — Real-Time Cross-Platform Companion Platform [Live: couplewatch.in | GitHub] Feb 2026 – Present
Tech Stack: React, React Native, Supabase, PostgreSQL, WebRTC, Tailwind CSS, JavaScript

- Architected and launched a production real-time synchronized platform (couplewatch.in) enabling low-latency media sharing and P2P communication for long-distance pairs.
- Engineered peer-to-peer WebRTC video and audio streaming pipelines, overcoming symmetric NAT traversal and bandwidth throttling.
- Designed relational PostgreSQL schemas and real-time event subscription channels in Supabase for millisecond-level state sync across web and mobile clients.
- Implemented responsive, accessible mobile (React Native) and web (React) interfaces styled with Tailwind CSS.

Mission Copilot — AI Lunar Telemetry Simulation & Decision Platform [Live Demo | GitHub] Nov 2025 – Feb 2026
Tech Stack: React, Node.js, Express.js, OpenAI & Gemini APIs, Web Speech API, Heuristic Modeling

- Architected an AI-powered aerospace mission simulator ingesting live telemetry streams (velocity vectors, fuel burn, crew vitals) for real-time situational decision support.
- Engineered predictive risk analysis models for trajectory drift estimation and structural integrity monitoring under anomalous lunar descent conditions.
- Integrated hands-free bidirectional voice controls via **Web Speech API**, enabling real-time voice queries with sub-second AI response latency.
- Built an Express backend handling persistent simulation states, RESTful query endpoints, and telemetry broadcast.
- Recognized as nationwide **Finalist at Smart India Hackathon (SIH) 2025–26**.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science 2025 – 2029 | CGPA: 7.24 / 10.0
Newton School of Technology X Svayasa
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems (PostgreSQL), Operating Systems.

Intermediate (Class XII) — Apex School (Grade: 70.0%) 2022 – 2024

Matriculation (Class X) — Holy Cross School (Grade: 85.0%) 2021 – 2022

HONORS & LEADERSHIP

- **Smart India Hackathon (SIH) 2025–26 Finalist:** Honored nationwide for engineering "Mission Copilot" aerospace simulation platform.
- **Organizer, General Championship 2026–27:** Directed cross-college tournament operations, scheduling, volunteer coordination, and participant logistics.

- **Sports President:** Spearheaded athletic programs, competitive team selection, and campus event execution.
